Education

University of Electronic Science and Technology of China (UESTC) **2024.9 - 2028.6**
Yingcai Honors College **Major:** Fundamental Science of Mathematics & Physics (Elite Talent Class) **Focus:** AI
GPA: 3.96/4.0 **Weighted Average: 91.55** **Rank: 2/24** **CET-4: 581** **CET-6: 561**
Core Courses: Advanced Calculus, Advanced Algebra and Geometry, University Physics, Probability and Mathematical Statistics, Data Structures, Advanced Programming Language Design, Machine Learning, etc.

Research Experience

➤ Computational Pathology & Multiple Instance Learning **2025.3 - 2025.8**

CKMIL: Cascaded Key-Instance Attention Multiple Instance Learning for Histopathology Whole Slide Image Analysis [pdf] Submitted to AAAI 2026 **First Author**

Advisors: Prof. Liang-Jian Deng, School of Mathematical Sciences, UESTC Asst. Prof. Hao Chen, HKUST

- Proposed CKMIL, a cascaded key-instance attention framework for whole slide images (WSIs) with sparse diagnostic signals, using key instances to guide efficient dependency modeling; achieved leading results on multi-cohort cancer subtyping and survival prediction (BRACS, TCGA).
- **Contribution:** Project lead; drove data processing, method design, experiments, and paper writing.

➤ LVLM Safety & Jailbreak Attacks **2025.9 - 2025.12**

Persuasion in Scene: A Multi-Agent Typographic Jailbreak Crew against Large Vision-Language Models [pdf] Submitted to CVPR 2026 **Co-First Author**

Models as Lego Builders: Assembling Malice from Benign Blocks via Semantic Blueprints [pdf] Accepted by CVPR 2026 **Third Author**

- Proposed PIS, a multi-agent cross-modal jailbreak framework, and StructAttack, a single-shot, optimization-free attack via semantic slot-filling, both achieving leading attack success rates on open- and closed-source LVLMs.
- **Contribution:** As co-first author of PIS, contributed centrally to ideation, method design, experiments, and writing; as third author of StructAttack, adapted and evaluated the method on SafeBench.

➤ Pathology Foundation Models & Efficient WSI Analysis **2025.12 - Present**

From Full-Bag Diagnosis to Budgeted Patch Selection: Role-Decoupled Benchmarking and Adaptation of Pathology Foundation Models in Whole-Slide Imaging Target: IEEE TMI 2027 **First Author**

Advisors: Prof. Liang-Jian Deng, School of Mathematical Sciences, UESTC Asst. Prof. Hao Chen, HKUST

- Found that some morphological tasks need no image reconstruction, due to image redundancy and foundation model (FM) robustness; studied FM capability decoupling in Selector×Consumer settings and proposed adaptation fixes.

➤ Multimodal Post-Training & CoT Reasoning **2026.4 - 2026.10**

ReMAP: Restoring the Perceptual Cycle with Reasoning-Time Latent Visual Memory

Advisor: Asst. Prof. Shanghang Zhang, School of Computer Science, PKU Submitted to ICLR 2027 **First Author**

- Analyzed reasoning-time visual memory along curation, organization, and access: local evidence needs global context, compact latents balance accuracy and cost, and access utility depends on the reasoning state.
- Proposed ReMAP, coupling a question-conditioned Global memory with a state-guided Local memory returned as compact latent tokens, plus an RL access policy trained via branched rollouts; leads across ten benchmark families, beats the prior best on MuirBench/MIMIC by 8.38/14.84 points, and cuts visual tokens by 51.0–76.8%.

Skills

- **Tools:** Python, PyTorch, Linux, Git, LaTeX, Codex, Claude Code; idea validation, experiments, writing.
- **Deep Learning:** Transformer, Mamba; test-time training, post-training, and evaluation of multimodal LLMs.

Honors & Awards

- UESTC Outstanding Student Scholarship First Class **2025**
- UESTC Outstanding Student Scholarship First Class **2026**
- Mathematical Contest in Modeling (MCM/ICM) Meritorious Winner **2026**
- UESTC (iFLYTEK Cup) 1st AI Agent Creativity Competition First Prize **2026**
